I even bought 1 manual from Australia, by mistake. A few years ago, I visited an antique store, outside the small building I found a pink sewing machine in a case, left to the elements for a few summers. It was totally destroyed. Just pieces of metal and wood. It was shocking. Ever since then I started collecting sewing machines. They are worth saving, fixing and using. I love their design, colors, even their sounds. I become interested to learn to sew. I make sure those machines are in heated rooms. Now I have 5 sewing machines in my living room. My husband asked me if I am planning to have a sweat shop in our living room. I love sewing machines just like I love high heels. Hope you get as much joy from yours as I get from mine. Thanks, Roxana But please contact me if you have any problems with your order. If you are not sure what manual you need for your machine, please contact me before you buy it, and I will help you find the manual you need. I would ask you to provide with the machine ID number you see when you lift the sewing machine and a photo. It will show a number like 158.13571, those number will determine the manual needed. The seller uploaded it to me very quickly and I was able to get sewing again. Thank you. for great service. Etsy shops never receive your credit card information. The most popular color. You guessed it black. If there is a display band of decorative stitches on the front of your machine look on the bottom right of that panel. If the number there is a VX920 there is no manual available for it BUT you can use the manual from the VX 970 which IS available. Do a search for that model manual in Spanish and you should find one. Login to post Those machines have the bobbin case that is installed from the left side of the machine. For most purposes, this default cannot be changed to center. Machines that have the bobbin case installed from the front of the machine generally have the needle center default position. However, it appears to be a newer model machine post 1970, so there is a good chance your machine has a needle position setting. Brother Compal Galaxie 870 Service Manual free download schematics. So far, Ive had 4 different Brother machines from that time frame and out of the 4, ALL of them have had broken cam stacks and gears and are unrepairable. Parts are either NLA or simply way too costly to buy. Ive not seen a Brother machine from these lines that havent been parts machines. I went over and it was a Brother Boutique. Kind of cute, with pink accents, but I knew from my past experience to look under the hood. And sure enough this is what I found. The fork is even nylon and is also stress fractured. It cant even sew a straight stitch in the current state. My friend handed off the machine to me as a parts machine and I spend part of the day taking it apart. I thought Id post some photos of whats under the hood on these models. So far Ive seen this on the Pacesetter, Boutique and Galaxie models. Im sure there are more. Be sure to test sew any Brother machines you may be interested in and look under the top or pass on them completely. Way too many breaking points on these machines and not worth saving, IMO. I see grease on the nylon gears. Should nylon gears be greased. I think Ive read here not to but I want to be sure. Thanks, RodneyBut, as you see, there are times you will get machines that have been already greased. Amazingly, it runs perfect, maybe because noone ever adjusted or repaired it I see grease on the nylon gears. Should nylon gears be greased. I think Ive read here not to but I want to be sure. Thanks, Rodney EDIT Heres the info from the manual for flat bed version, 478 There is either screws down through the top, or spring catches or tab on the right with a screw on the left. I cant see the top of your machine. My Ideal Automatik made of a Japanese casting, in The Republic of Ireland, for the German market is almost a twin for you machine. Except it uses cams.

JoeNew and old he didnt specify the vintage, and I automatically rule out the 5060s machines from this statement he said they more often than not have broken gears right from the factory. He said hed opened boxes straight off the shelf and found broken gears. The Galaxie 221A I had here looked like the nylon gear had been split by the rivetting stage. It still sewed lovely duckies, but I couldnt sell it in good conscience. I didnt differentiate a lot for the first 18 months, and took any machine that came across my desk to learn. I had a lot of Brother machines to dispose of because of broken gears. Ive never really gone for Brother machines, and it looks like I never will. More The roller on its sole enable it to glide effortlessly over “sticky” textiles such as leather and

vinyl More Can be used as a 1, 2 or 3 Cord Cording Foot. Design your own braids and trims. Simply place cords in the foot and sew over them for a simple couching method. More A VERY specialised tool, all this foot does is put bindings around the cut edge of the fabric More It is equipped with a small funnel to fold More It's absolutely convenient and timesaving, as this eliminates the extra step of gathering a valance first More When sewing pintucks, it is used with a double needle. The grooves in the sole of the foot help you stitch perfectly parallel pintucks More The fabric is guided More Perfect for applique, the bottom of the foot has a rectangular shaped More The area is much wider than the standard presser foot, thus the greater visibility. The foot also has a groove on the underside that allows stitches to feed more smoothly under the foot, also for adding trim More Use with medium weight fabrics. This foot is equipped with a pin which acts in a similar manner as the stitch finger on an overlocker More The 3 hole foot can be adjustable where the thread slides under the guide bars, but this 5 hole version and 7 hole versions need threading through set holes. Your cord or decorative thread or thin ribbons are passed through the guide or hole as you sew it in place More Its double sided so you can stitch both right and left sides makes working with fabric easy More. If it has, raise the feed to ensure the fabric will move forward. Computerised machines will remind you to do this. This will switch the machine back to Rethread the machine following the threading instructions in your machine's instruction manual. You will also find instructions for your machine online via the Brother solutions centre Note We find that Butterfly and Singer Branded needles are often not compatible with Brother sewing machines and may cause issues with your machine not picking up lower thread. We would recommend using either Organ or Schmetz branded needles. Rethread the machine following the instructions in your manual and ensure that the foot is raised. If there is tension when pulling the thread, then the thread may be unsuitable for machine sewing and should be replaced with machine sewing thread from a reputable brand. It's possible there be a timing issue with your machine.

Contact your Brother dealer to arrange a service or contact our customer service team. Make sure the presser foot is lifted before threading the machine. Set your bobbin correctly into the machine. For top loading bobbins, the thread needs to be going around the bobbin in an anticlockwise direction. Use the guides on your machine or refer to your instruction manual. If you have a mechanical machine, check that the foot is lowered before sewing. Computerised machines will remind you to do this. Using thread that does not pull through smoothly can cause thread breakages,

poor stitching or damage to your machine. For best results, you should use a good quality, branded thread. The thread should pull through the machine with no tightness.
